Project Design Phase-I
Solution Architecture

Date	26 September 2022
Team ID	PNT2022TMID03640
Project Name	Project - A Novel Method For Handwritten Digit Recognition System

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

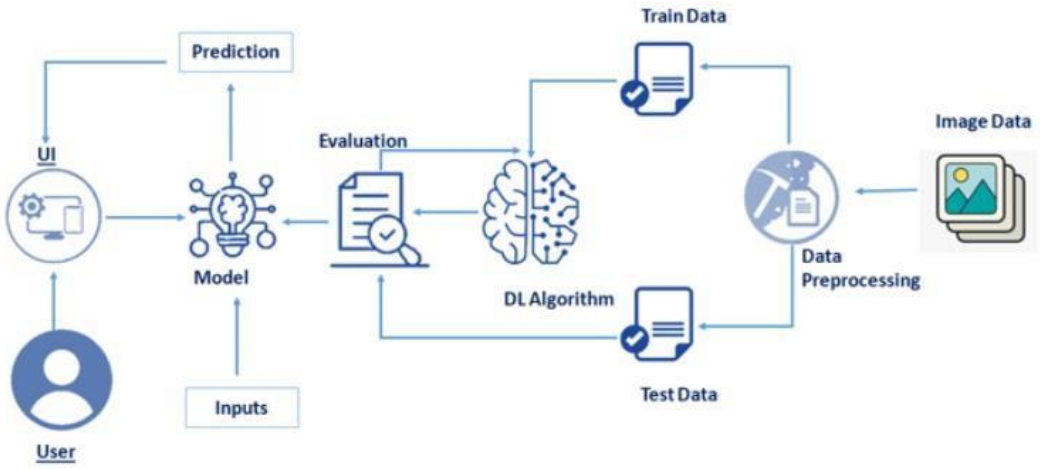

Figure 1: Architecture and data flow of the novel method for handwritten digit recognition system
